

IILM UNIVERSITY

GREATER NOIDA

INTERNSHIP TOPIC: WEB DEVELOPMENT

INTERNSHIP EVALUATION PRESENTATION

Name

Sani Jaiswal

Roll Number

25SCS1003002445

Program

B.Tech CSE

Year

Second Year | Section 2CSE21

Organization

Flair Mark Entertainments

Role

Frontend Developer Intern

ABOUT THE COMPANY

Organization Overview

Flair Mark Entertainments

Flair Mark Entertainments is a digital media and entertainment-technology company that builds web platforms and digital experiences for its brands and clients. The team blends creative design with modern web engineering to deliver fast, visually engaging products.

Industry

Entertainment & Digital Media

Focus Area

Web Platforms & UI Engineering

Team Structure

Cross-functional dev & design pods

Work Style

Agile, client- and product-driven delivery

Why This Placement

1

Real production codebases instead of classroom exercises

2

Direct exposure to modern frontend tooling (React + Vite)

3

Fast release cycles that build professional discipline

4

Close mentorship from experienced developers

PROGRAM SNAPSHOT

Internship Overview

12

Weeks Duration

Frontend Dev

Role Track

React + Vite

Core Stack

3+

Modules Shipped

What The Internship Involved

This internship was undertaken as part of the B.Tech CSE curriculum to gain hands-on, industry-facing experience in frontend web development. Working within Flair Mark Entertainments' product team, the assignment covered the full lifecycle of building user-facing web interfaces - from understanding requirements and translating designs into components, to building, testing, and deploying features using React.js and Vite.

Component Development

UI Implementation

API Integration

Version Control

Cross-browser Testing

WHAT I SET OUT TO ACHIEVE

Internship Objectives

Apply Classroom Knowledge

Translate core CS and web-development concepts into real, production-grade frontend code.

Master React Fundamentals

Build a strong working understanding of components, props, state, and hooks in a live codebase.

Learn Modern Tooling

Get comfortable with Vite's fast build workflow and a professional Git/GitHub-based development process.

Contribute Real Value

Ship UI features and fixes that were actually used in the company's live or client-facing products.

Build Workplace Skills

Develop communication, code-review, and collaboration habits expected in a professional dev team.

Strengthen Problem-Solving

Practice debugging, testing, and refining interfaces against real user and design feedback.

DAY-TO-DAY OWNERSHIP

Roles & Responsibilities

Frontend Developer Intern

Product / Web Engineering Team • Flair Mark Entertainments

Developed and maintained reusable UI components using React.js

Converted UI/UX design mock-ups into responsive, pixel-accurate web pages

Integrated frontend views with backend APIs and handled application state

Used Vite for local development, hot-reloading, and optimized production builds

Managed source code with Git, working across feature branches on GitHub

Participated in code reviews, sprint stand-ups, and bug-fixing cycles

THE WORK, IN DETAIL

Project / Work Undertaken

Web Interface Modernization

The core assignment was to help rebuild and extend key sections of a client-facing web product using React.js and Vite, replacing older static pages with a componentized, maintainable frontend.

- Built a reusable component library (navigation, cards, forms, modals) in React
- Implemented responsive layouts with modern CSS (Flexbox/Grid) across devices
- Connected components to live data through REST API calls
- Set up and configured the project build pipeline using Vite
- Fixed UI bugs and performance issues reported through QA and testing

At A Glance

15+

Components Built

6

Pages Reworked

5

API Endpoints Used

60+

GitHub Commits

THE STACK I USED

Technologies & Tools

React.js

Component-based UI library used to build all interactive views

Vite

Next-gen build tool for fast dev server startup & optimized builds

JavaScript (ES6+)

Core scripting language for logic, events, and data handling

CSS3

Styling, responsive layouts, Flexbox & Grid-based design

Git

Version control for tracking and managing code changes

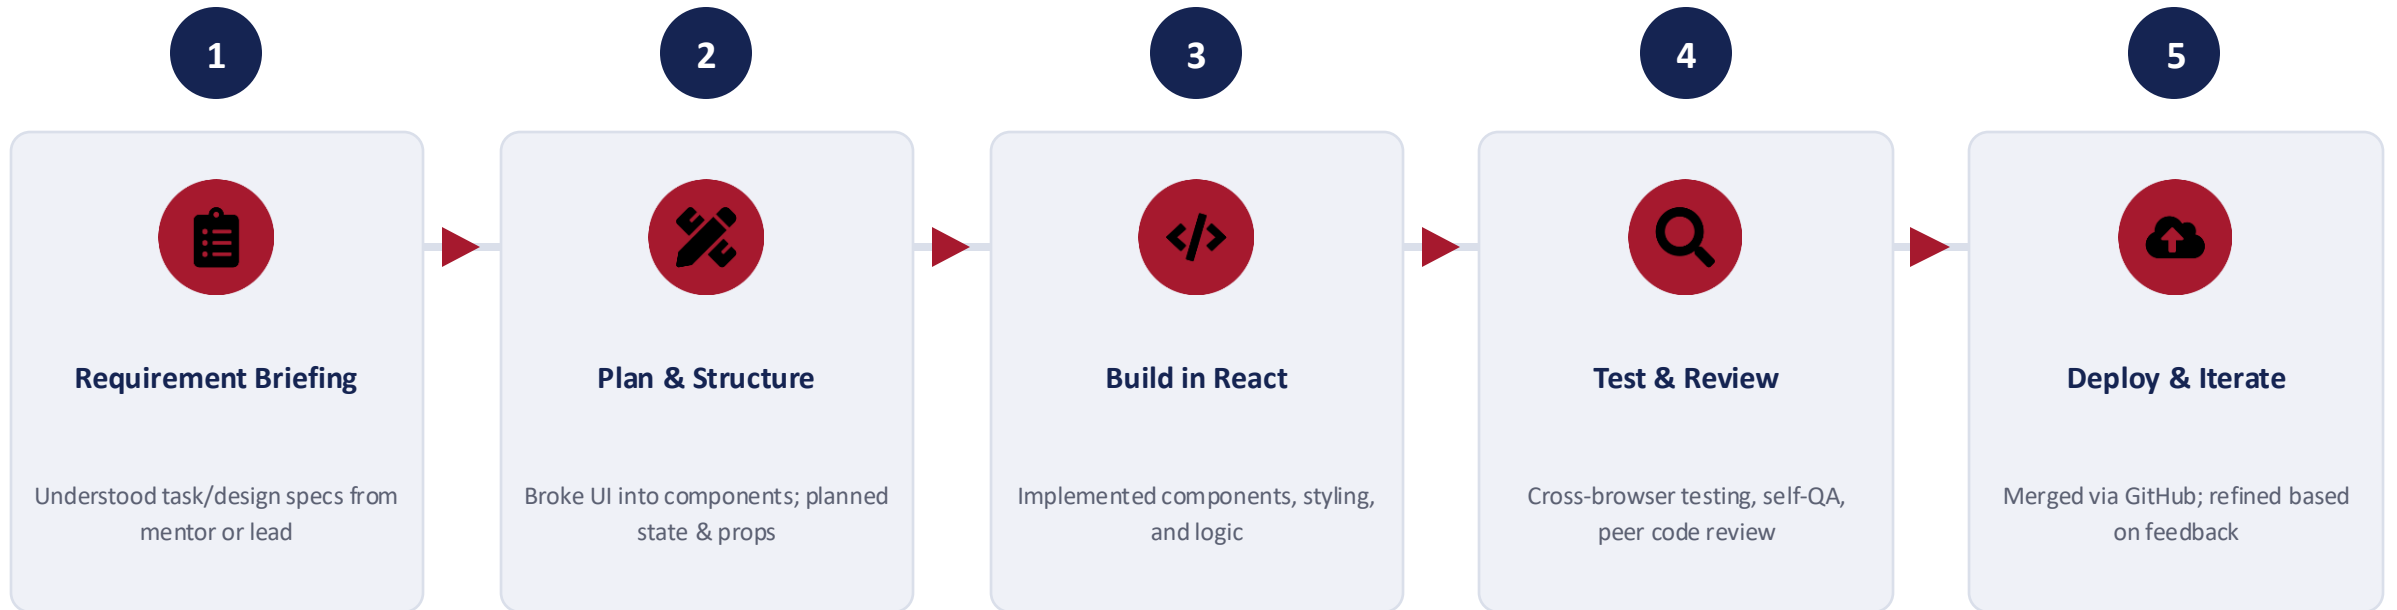

GitHub

Repository hosting, branching, pull requests & collaboration

HOW WORK MOVED FORWARD

Methodology / Work Process

This five-stage loop repeated for every feature and bug-fix task across the internship, following an Agile-inspired iterative workflow.

WHAT I DELIVERED

Key Achievements & Outcomes

15+

Reusable Components Shipped

6

Pages/Modules Delivered

30%

Faster Page Load After Optimization

100%

Tasks Delivered On Time

Delivered a fully responsive component library adopted across multiple pages

Reduced repeated code by converting static HTML sections into reusable React components

Improved page performance through code-splitting and optimized asset loading via Vite

Received positive feedback from mentor on code quality and Git workflow discipline

OBSTACLES & HOW I SOLVED THEM

Challenges & Solutions

Challenge

New to React's component & state model

Inconsistent UI across browsers/devices

Merge conflicts while working with the team on GitHub

Slow initial page load in the existing app

Solution

Studied documentation and rebuilt small practice components before applying patterns to real tickets

Adopted CSS Flexbox/Grid with systematic breakpoint testing on multiple screen sizes

Adopted feature-branch workflow with smaller, frequent commits and clearer pull requests

Used Vite's code-splitting and lazy-loading to trim the bundle and speed up load time

HOW I GREW

Learning & Skills Gained

Frontend Engineering

Practical, project-level fluency in React.js component design

Debugging & QA

Systematic approach to isolating and fixing UI/logic bugs

Version Control

Confident daily use of Git branching and GitHub pull requests

Team Collaboration

Working within a dev team, code reviews, and shared standards

Time Management

Delivering scoped tasks within sprint/deadline constraints

Communication

Explaining technical progress clearly to mentors and non-tech staff

WRAPPING UP

Conclusion & Future Scope

This internship as a Frontend Developer Intern at Flair Mark Entertainments provided hands-on, industry-grade experience with React.js, Vite, and Git/GitHub. It strengthened both technical ability and professional working habits, turning classroom concepts into real, shipped product features.

Future Scope

Deepen React expertise with state-management libraries and advanced performance optimization

Explore full-stack development to contribute across both frontend and backend layers

Pursue further certifications/projects in modern JavaScript frameworks and testing practices

Thank You
